THP-1 sampling comparison: p_c = 0.001
Legacy with replacement: 26,667 edges, 11,647 positives
80% without replacement: 19,201 edges, 8,522 positives
TP counts (MI-tie expectation)
MI-ranked; shaded tie range
Actual rank shuffle
Response-positive edges
Top-ranked eligible edges, k
Realized shuffled EPR
Integer TP / shuffled TP
Top-ranked eligible edges, k
ROC within emitted eligible pool
Sensitivity (own emitted pool)
1 - specificity (own emitted pool)
Legacy with replacement: 0.6092
80% without replacement: 0.6069
Each arm stops at its own emitted pool. EPR uses its own realized R seed-1 shuffle; ROC retains MI ties.
