THP-1 sampling comparison: eligible-source predictions

Frozen reconstructed perturbation-response reference; not exact Figure 6a reproduction

p_c = 0.01 | 42,067 eligible edges / 17,727 positives vs 23,964 eligible edges / 10,416 positives

p_c = 0.001 | 26,667 eligible edges / 11,647 positives vs 19,201 eligible edges / 8,522 positives

Each arm stops at its own pool. Emitted-pool AUROC is conditional; response membership does not establish direct regulation.
